

Week 4:

Department of Fashion Design and Marketing

Unit: AAD 108: Fashion Figure Drawing (new)

Topic: Dynamic Poses & Movement

Dynamic Poses & Movement samples

Core Standard Poses

- **Front View (Straight Pose):** The most common for technical sketches, showing the garment's full details clearly.
- **Back View:** Essential for showing details like zippers, seams, or back design elements.
- **Side/Profile View:** Used to show the silhouette and how the fabric drapes or fits the curves of the body.
- **Three-Quarter Turn:** A mix of front and side that creates more artistic angles and highlights garment depth.

Figures 'a' and 'b' below show straight, back, side, and three-quarter poses for both males and females, respectively."

Fig: 'a'

Fig: 'b'

Dynamic and Artistic Poses

- **Runway Walk:** A high-movement pose with legs crossed or mid-stride to show how a garment looks in motion.
- **Contrapposto (The S-Curve):** Shifting weight to one hip, creating a natural, relaxed curve that adds drama to the sketch.
- **Hand on Hip:** A classic pose used to create structure and attitude.
- **Sitting or Crouching:** Often used for casual, streetwear, or lounge collections to show comfort and fit in different positions.

Sitting or Crouching pose

Assignment: Motion in Style – Dynamic Fashion Gesture

Objective

Create a high-energy fashion plate featuring **four (4) dynamic and Artistic Poses** illustrated above. Show the steps from skeleton to fleshing out the forms. The focus is shifted from rigid measurements to the “line of action,” capturing the fluidity and energy of a body in motion—such as walking, twisting, or striking dramatic runway poses.

Technical Requirements

- **The Line of Action:** Each sketch must start with a dominant curve or "swoosh" that dictates the energy and flow of the pose.
- **Weight & Balance:** Demonstrate an understanding of "Contrapposto" or weight shifts. The "balance line" dropped from the neck should show how the body compensates for movement to stay grounded.
- **Perspective & Foreshortening:** Incorporate poses where limbs recede or advance (foreshortening) to create depth rather than flat, static silhouettes.
- **Composition:** Arrange your figures on a single **A4 page**. Use the placement of figures to create a sense of a "running" or "walking" sequence.
- **Medium:** explore media i.e., ink, watercolor, colored pencil etc.

Linework: Use varying line weights (thick for weight-bearing areas, thin for details) in ink or graphite.

Rendering: Watercolors or colored pencils to emphasize the "swing" of the body or the movement of fabric.

Note: This assignment will be graded out of 20 marks as part of the Continuous Assessment Test (C.A.T.).
