

HFD 108 FASHION FIGURE DRAWING

ASSIGNMENT GUIDELINE 4 (WK 5/6)

Facial Features & Extremities

Studies of individual facial features for structural understanding, including simplified steps and methods for fashion illustration, are shown below.

Exercise 1

Illustrate the **ears**, **eyes**, **nose**, and **mouth** by creating clear, step-by-step sketches that show the progression from basic construction to detailed shading, with each stage neatly arranged and labeled.

Face/Head

A standard face follows a specific grid for balance.

Eyes: Place them on the horizontal center line.

Space: Leave one eye-width between both eyes.

Nose: The base sits halfway between eyes and chin.

Lips: Position the opening halfway between nose and chin.

STEP 1

STEP 3

STEP 4

Exercise 2

Demonstrate the step-by-step construction of a proportionally accurate face using standard guidelines by showing how to position the eyes on the center line with one eye-width spacing, the nose halfway between the eyes and chin, and the lips midway between the nose and chin.

Hands

Palm: Start with a simple square or pentagon.

Thumb: Treat the base as a separate triangle.

Fingers: Use "cylinders" divided into three equal joints.

Gesture: Keep the wrist loose to show movement.

Method 1

Method 2

Method 3

Arms

1. Plot the Joint Circles

Mark the **shoulder**, **elbow** (at waist level), and **wrist** (at hip level) with small circles to set the length and pose.

2. Tube the Upper Arm

Draw a cylinder connecting the shoulder to the elbow, keeping the width mostly uniform to establish the base structure.

3. Taper the Forearm

Draw a second cylinder from the elbow to the wrist, making it wide near the elbow and narrowing sharply toward the small wrist joint.

4. Trace the Final Contour

Outline the cylinders with smooth, sweeping lines, replacing rigid edges with subtle curves to achieve a lean, stylized fashion look.

Examples of hands dynamic poses

Exercise 3

Generate various dynamic hand poses depicting the following

- **Arms at the side** (classic)
- **Hands on hips** (angular)
- **Arm reaching forward** (foreshortened)

Feet

Step 1: Ankle Circle – Place a circle/semi-circle at the base of the leg to anchor the foot.

Step 2: Compressed Trapezoid – Draw a short, wide trapezoid below the circle for the top of the foot.

Step 3: Toe Base Triangle – Sketch a wide, flat triangle at the bottom to define the spread of the toes.

Step 4: Toe Row – Add five small circles along the triangle's base, starting with the largest for the big toe.

Below, Fig 1 illustrates the steps described above, while Fig 2 demonstrates the process of achieving a dynamic side view pose.

Fig 1

Fig 2

Exercise 4

Generate various dynamic feet poses depicting the following

- Foreshortened.
- Foot in high heels.
- Show the process from basic shapes, forms and colour can be applied

Garment Silhouettes & Construction

Silhouette is the first impression a garment makes, often viewed as a "shadow" or black shape without internal details.

The silhouette is dictated by the fabric's **hand** (how it feels and drapes):

Stiff Fabrics (Denim, Neoprene, and Heavy Wool): Hold geometric, architectural silhouettes (A-line, Boxy).

Fluid Fabrics (Silk, Chiffon, and Jersey): Create soft, "gravity-fed" silhouettes that cling to the body.

Common Silhouette Types

A-LINE

A-Line: Narrow at the top, widening toward the hem.

Hourglass: Fitted at the waist to emphasize body curves.

Sheath: Form-fitting from top to bottom.

Empire: A high, raised waistline positioned just under the bust

MERMAID

Straight/Column: A rectangular shape from shoulders to hem.

TRUMPET

Trumpet/Mermaid: Hugs the body to the knee before flaring out

Exercise5

Illustrate **ten (10) garment silhouettes** through clear and well-proportioned sketches. The objective is to demonstrate your understanding of basic fashion forms and structure.

Instructions:

- Select and sketch **10 distinct garment silhouettes** (e.g., A-line, sheath, empire, mermaid, boxy, Cocoon, tulip, cape, balloon, fit and flare etc.).
- Use **clean line drawing** (fashion flats or simple figure sketches).
- Ensure **accurate proportions and balance** in each silhouette.
- Label each silhouette clearly.

Fashion flats

Fashion flats (also called *technical flats* or *flat sketches*) are **two-dimensional drawings of garments shown as if they are laid flat on a surface**, without a model or body. They are used mainly in fashion design to communicate construction details clearly to pattern makers and manufacturers

Characteristics and function

A **2D line drawing** of a garment (front, back, sometimes side view)

Shows **details like seams, stitching, pockets, collars, zippers, hems**

Drawn in a **clean, technical style (not artistic or exaggerated)**

Used as a **“blueprint” for production** in tech packs

Different between the fashion flats and fashion illustration

Feature	Fashion Flats	Fashion Illustration
Purpose	Technical communication	Artistic presentation
Style	Simple, precise lines	Stylized, expressive
View	Flat (no body)	On a model (croquis)
Focus	Construction details	Mood, fabric, movement

Visual samples of fashion flats illustrating both the front and back views of each garment.

Exercise 6

Create fashion flats for the following six (6) basic garments:

(1). T-shirt, (2).Shirt , (3) .Dress, (4).Trouser, (5).Skirt, (6). Jacket

Instructions:

- Show **front and back views** for each garment
- Use **clean, accurate line work**
- Apply **uniform shading**
- Ensure **neat and professional presentation**
